Ramkrishna Goswami

Java Developer | Backend & Microservices Engineer
Kolkata,West Bengal |+91-8509563174 | Ramkrishnagoswami10@gmail.com | linkedin.com/in/ramkrishnagoswami | github.com/Ramkrishna97

PROFESSIONAL SUMMARY

Java Backend and Microservices Engineer with 4 years of experience building, modernizing and supporting enterprise applications using Java 8/17/21, Spring Boot, Spring WebFlux, Kafka, MongoDB, Oracle and REST APIs. Experienced in orchestration-based and event-driven microservices for high-volume XML/JSON transformation, transaction validation, rate limiting, configuration-driven processing and distributed service integration. Strong end-to-end ownership across design, development, testing, security, CI/CD, deployment, UAT and production support, with a focus on SOLID design, TDD, reactive programming, scalability and maintainability.

TECHNICAL SKILLS

Languages: Java 8/17/21, Core Java, JavaScript, Python, HTML, Shell Scripting
Backend & Frameworks: Spring Boot, Spring MVC, Spring WebFlux (Reactive), JPA/Hibernate, REST APIs, Swagger/OpenAPI, JAXB, DOM, Microservices Architecture
Frontend: React, Angular, JavaScript, Thymeleaf, HTML, GWT
Databases: MongoDB, MySQL, Oracle DB, Oracle Exadata, H2
Messaging & Integration: Apache Kafka, RabbitMQ, gRPC, Event-Driven Architecture, API Gateway, cloud-client integration
Security: mTLS, IAM, centralized security service integration
DevOps & CI/CD: Docker, Kubernetes, OpenShift, Maven, Gradle, Git, Bitbucket, TeamCity, uDeploy, Tekton, Harness, Lightspeed, Grafana, SonarQube, Snyk, BlackDuck, Kibana
Testing & Quality: JUnit, Mockito, PiTest, TDD, SoapUI, Postman, Diffblue
Engineering Practices: SOLID Principles, Reactive Programming, Agile/Scrum, CI/CD, RCA, TDD ,L2/L3 Production Support
AI-Assisted Development: GitHub Copilot, Claude , cursor , Devin, Continue
Cloud & Platforms: Oracle Cloud Infrastructure (OCI), Linux, Tectia , GCP

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS) - Java Developer [Oct 2022 – Present]

- Modernized a legacy GWT/Core Java application from Java 6 to Java 8, introducing **Java 8** language and library features, resolving functional defects and SonarQube findings, and expanding automated test coverage to improve maintainability and release readiness.
- Designed and developed a Java 17/Spring Boot/Spring WebFlux **orchestration microservice** for XML/JSON transformation using JAXB, DOM and StAX parsers, with JSON configuration enabling new data formats without core-code changes. Optimized reactive processing with Reactive Kafka and Reactive MongoDB, cutting processing time by 30%, supporting **10K TPS** and improving SLA compliance from 96% to 99.5%; implemented MongoDB configuration, rollback and region/country-specific loading via pod-level CLI, end-to-end controller-to-database-to-Kafka tests, and SoapUI performance comparisons of Kafka versus REST/RestTemplate using TPS/TPR.
- Built an event-driven Java 21/Spring Boot microservice for cash, payment and transaction processing with **SOLID**-based, stateful, configuration-driven validation; secured downstream integration through **mTLS**, centralized authentication and cloud-client calls. Implemented **Reactive Kafka/MongoDB** flows, MongoDB CLI loading through Kubernetes pod jobs, Docker scripts and region-specific Kubernetes YAML for cron jobs and environment settings, then deployed to OpenShift and validated real-data performance in UAT; maintained >90% test coverage with JUnit/Mockito, **TDD**, unit/integration/functional testing and **PiTest mutation testing**.
- Strengthened engineering quality and delivery across services by resolving **SonarQube** issues and CVE/CVM findings with Snyk and BlackDuck; created region/country-specific Kubernetes deployment scripts and tracked CI/CD across OpenShift, Harness, Tekton, Lightspeed, TeamCity and uDeploy. Delivered a currency-management microservice using SOLID and TDD, achieving 25% performance improvement and 10% lower SDLC time with GitHub Copilot and Claude; provided L2/L3 support and root-cause analysis for critical incidents, coordinated with SIT/UAT, and supported reliable, minimal-downtime releases in Agile/Scrum.
- Contributed to an **internal candidate evaluation platform** using React, Angular, Java 21, Spring Boot, microservices, Thymeleaf and H2; supported Excel-based evaluator inputs and candidate details, reusable interview question-and-answer content, and generation of Excel reports and visual diagrams.

ADDITIONAL PROJECT & RECOGNITION

AI Hackathon Project - TCS AI Spark Award Winner | Java, Spring Boot, Low-Code Platform

- Built and deployed a working internal AI hackathon application using a low-code/no-code platform, completed functional testing and SonarQube analysis, and received the TCS AI Spark Award for innovative idea and execution.

EDUCATION

Bachelor of Engineering in Civil Engineering - Chandigarh University, 2015-2019 (CGPA: 7.35)

CERTIFICATIONS

- Oracle Certified Java Associate (OCJA - SE8)
- Oracle Certified AI Foundation Associate
- AWS Certified AI Practitioner (AIF-C01)

AWARDS & RECOGNITION

- Star Performer Award - Tata Consultancy Services, for outstanding contribution and commitment to excellence.
- TCS AI Spark Award - for innovative contribution to an internal AI hackathon.
